

Mike Chanetsa

I started this course of Carpentry and Joinery in January 2023 and I will complete in December 2024.

I am interested in carpentry because I will gain some experience and having a lot of skills. We are doing theory whereby we write some exercises and notes and in practical's we make joints for example how to make a table and so on. During practical lessons sometimes we make tables, chairs, beds, kitchen units and wardrobes.

There is also good relationship between the community and us where we make chairs, tables, beds, wardrobes and kitchen units and can be sold at an affordable price so that people in the community can buy them. We also visit the community to fix their properties like chairs, tables etc and at schools which are nearby they hire us to repair their equipment like ceilings, doors etc.

After I have finished my course I am looking forward to work on my own and I need to buy some tools I will use, for example saws, drill hammer, chisel, rasp, screw drivers, carpentry machines so that I will work as an self-employment as there are no formal jobs in our country.
